Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Description

is

. No. is the greater to is derived

the number of results predicted by chance to have a r than or equal to the score of the result being printed, ed by analysis of the total score distribution.

AL MOL. CELL. BIOL. 12:10-21(1992).

C. IF FUNCTION: IMMEDIATE-EARLY PROTEIN LIKELY TO PLAY A ROLE IN CELL.

C. GROWTH REGULATION. ITS OVEREXPRESSION IS ASSOCIATED WITH

TUMORIGENESIS AND EXPRESSION OF A N-TERMINAL-TRUNCATED VERSION

C. OF NOV GENE IN CHICKEN EMBRYONIC FIBROBLASTS (CEF) IS SUFFICIENT

C. TISSUE SPECIFICITY: BRAIN AND HEART, AND AT A LOWER LEVEL IN

C. MUSCLE AND INTESTINE, IN THE EMBRYO. LUNG AND LESS SO IN BRAIN AND

C. MUSCLE AND INTESTINE, IN THE EMBRYO. LUNG AND LESS SO IN BRAIN AND

C. SPLEEN, IN ADULT CHICKEN.

C. DEVELOPMENTAL STAGE: MAV1-INDUCED NEPHROBLASTOMAS EXPRESS A HIGH

C. LEVEL OF NOV GENE WHOSE TRANSCRIPTION IS NORMALLY ARRESTED IN

C. ADULT KIDNEY.

C. SIMILARITY: BELONGS TO THE INSULIN-LIKE GROWTH FACTOR BINDING

PROTEIN FRAMILY. CEF-10/CYR61/CTFG/FISP-12/NOV PROTEIN SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

INTURE 388:237-238(1997).

I PUNCTION: THE METALLOTHIONEINS ARE INVOLVED IN THE CELLULAR SEQUESTRATION OF TOXIC METAL INONS AND REGULATION OF ESSENTIAL TRACE ELEMENTS. THIS ISOFORM BINDS EXCLUSIVELY COPPER.

I DOMAIN: 14 CYSTEINE RESIDUES ARE ARRANGED IN C'A-C GROUPS. THESE ARE THOUGHT TO BE THE METAL-BINDING SITES IN OTHER
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         METAL-BINDING;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                44
                                                                                                                                                                                                                                                                                                                                                                                      37 HCSNDDCKCGSQC

MOL. BIOL. 232:947-966(1993).

-!- FUNCTION: FACTOR XA IS A VITAMIN K-DEPENDENT GLYCOPROTEIN THAT CONVERTS PROTHEOMBIN TO THROMBIN IN THE PRESENCE OF FACTOR VA, CATALYTIC ACTIVITY: PREFERENTIAL CLEAVAGE: ARG-|-THR AND THEN ARG-|-THR AND THEN PROTHROMBIN TO FORM THROMBIN.

-!- CATALYTIC ACTIVITY: PREFERENTIAL CLEAVAGE: ARG-|-THR AND THEN ARG-|-THE DONDS IN PROTHROMBIN TO FORM THROMBIN.

-!- SUBUNIT: THE TWO CHAINS ARE FORMED FROM A SINGLE-CHAIN PRECURSOR BY THE EXCISION OF TWO ARG RESIDUES AND ARE HELD TOGETHER BY 1 OR MORE DISULFIDE BONDS.

-!- PTM: THE VITAMIN K-DEPENDENT, ENZYMATIC CARBOXYLATION OF SOME GLUTAMIC ACID RESIDUES ALLOWS THE MODIFIED PROTEIN TO BIND
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   <del>+</del> <del>+</del> <del>+</del>

-! SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

-!- DEVELOPMENTAL STAGE: EXPRESSED ALMOST UNIFORMLY IN

-!- SIMILARITY: HIGH, WITH OTHER NOTCH TYPE PROTEINS.

-!- SIMILARITY: CONTAINS 36 EGF-LIKE DOMAINS.

-!- SIMILARITY: CONTAINS 3 LIN/NOTCH REPEATS.

-!- SIMILARITY: CONTAINS 6 ANK REPEATS.
